

Gator USB

New product feature / retrofit option

New Gator machines (Gator 180, 250, 315, 400 Mk2) will be equipped with a USB socket to allow download of joint record data directly to a USB memory stick.

Thanks to a small intelligent adapter PCB the USB socket can also be retrofitted to Gator machines manufactured from 2003 onwards¹.

Features and benefits

- Allows use of readily available USB memory sticks for download of joint record data; no adapters are required to transfer the data from a machine to a PC.
- Very little training is needed – simply plug in the USB memory stick and use the familiar “database” menu as before.
- An indicator LED and audible sounder confirm successful download of data.
- Easy retrofit –
 - No need to update the Gator software - no ‘EPROM’ change or reprogramming is necessary².
 - Retrofit kits containing all the necessary parts for conversion are available.
 - Templates are included in the work instructions for easy and accurate fitment.
 - For convenience a ‘Toolkit’ (including the necessary hole punch and various drill bits) is available.
- It is also possible to ‘print’ joint records and ‘system variables’ data in a basic text format to a USB memory stick³.
- Backward compatible with ‘MiniTran’ unit. ‘Data Printer’ can also be used as before.

Order codes

703541	Retrofit kit for Gator machines without ‘Touchkey’ - e.g. 220V
703544	Retrofit kit for Gator machines with ‘Touchkey’ - e.g. 110V
703543	Retrofit ‘Toolkit’ containing hole punch and drill bits
703542	Touchkey assembly (for fitment of touchkey to non-touchkey machines)

¹ For machines which have power supply PCB V1.1 or later. Cannot be fitted to Gator 400 Mk1. Also please see footnote 2.

² No software update required in most cases. If the machine is fitted with software that is non- standard or hasn’t been updated in the last 5 years it is suggested that the Fusion Equipment technical department is contacted to verify compatibility.

³ Not possible with Chinese language. Limited functionality.
